

MAGIC PEARL

A visual and haptic experience is the anti-slip mat MAGIC PEARL with its innovative surface and fine pearl structure. Through an intelligent mix of technology and design, properties are made possible in the lower to medium price segment that are otherwise only reserved for the premium and luxury class. Even the first impression is a "wow effect". The fine pearl structure of this finish skillfully refracts the light on the elegant matt surface. When touching the products, the structure is an experience and one can immediately "grasp" the very valuable haptics.

The secret of these product properties is the double-layer structure of the mat material. A layer of higher-quality plastic, with a surface specially laser-engraved for this purpose, is refined on a basic carrier material. In combination, this not only protects the floor but also has an anti-slip effect. In combination with a cutlery insert with pearl surface, a homogeneous ensemble is created. The MAGIC PEARL series is available as sheet material in standard dimensions or as cut-to-size material for the frame systems commonly used in the market.

- Food-safe in accordance with the European Plastics Regulation (EU) No. 10/2011 and Regulation (EU) No. 1935/2004
- "Soft-feel surface and modern appearance
- Slip-resistant and noise-absorbing
- Easy to clean and replace
- Flexible use in all common drawer and cupboard types from 250 to 1200 mm width and 300 to 650 mm depth
- Also available as raw panels in max. format of 1,400 x 2,100 mm
- Can be combined with ELCO cutlery inserts with identical surfaces
