

VISIO will shape the design of the next few years, as it is based on the designs of the latest generations of drawers. The compartments are arranged logically and ergonomically to meet all the requirements of contemporary use and can be further subdivided by means of separate compartment dividers. The VISIO (an extra-flat version) was developed especially for use under induction hobs.

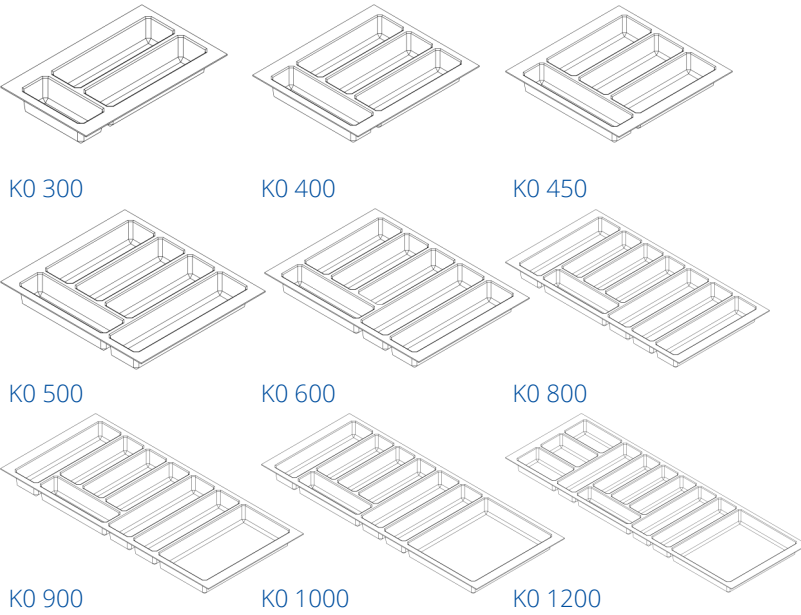

With its low height, it ensures optimum use of space and thus economical household management. The resistant plastic with a modern structured surface withstands daily use without restriction. The VISIO series can be individually adapted to any frame system commonly used in the market and is reliably supplied accordingly as a completely finished product.

- Optimum use of the drawer in the kitchen cabinet
- Special version for use under the induction cooker
- Available in all standard formats
- Easy to clean radii
- Ergonomic basic divisions
- Variable vertical space division
- Flexible use in all common drawer and cabinet types
- Large range width
- Made of durable plastic
